Presale will start on Tuesday February 22nd, 2022 @ 6pm EST to 11pm EST on each day and will end of Saturday February 26th at 12:01AM EST. The foundation reserves the right to close the sale at any point should the demand exceed the available Masternode supply.

To enter the sale, please go to reserveblock.io and click on the "Presale Live" button on the homepage. This will be the ONLY way for users to participate in the presale.

Upon clicking the "Presale Live" button, a new page through the RBX site will launch with the presale for the Masternodes from the RBX site only.

Users should NOT click on any other link sent to them from anyone! The foundation will NOT send links directly or indirectly for the sale. All users should ONLY trust the RBX site for the sale and transactions period! Never send funds to anyone in the Discord or anyone sending a dm for any reason whatsoever. The foundation will NOT ask for funds from anyone. Should you receive a link or a dm asking for you to transfer funds please report it immediately.

Each node is priced at $1,570 US & remittance will only be accepted in either BTC, ETH or LTC. Calculations will be automatic i.e. Nodes to amount / amount to nodes.

Node purchases are round numbers, the sale interface will automatically round to the nearest amount for each purchase. For example, if the desired purchase amount is $10,000 (again remitted in BTC, ETH or LTC) this would equal 6.37 nodes ($10,000 / $1,570 = 6.37 nodes), the automatic calculation would only allow a purchaser to complete the purchase for 6 nodes as fractional nodes are not possible. Should you wish to round up, you would have to add the proper funds to the purchase. Please do not deduct transaction fees from your purchase amount when sending or the system will not validate the transaction i.e. if you owe 1 ETH please send 1 ETH plus the tx fee.

Purchasers will be able to connect either their Coinbase or MetaMask wallets to participate and transfer. Should you have another wallet, you will be able to generate an address and then transfer from an outside wallet to the address you generated. Again, step by step instructions will be automatically provided on the presale interface through the site as your transaction is taking place.

RESERVEBLOCK.IO

In order to prepare for your purchase and upon deciding on the amount / nodes you wish to purchase, please make sure to check with your wallet provider for your daily transfer limits. You will need clear funds in your wallets to do any transfer, which in some cases will require newly transferred funds 5 days to clear from an outside account. Once you have cleared funds, some users have daily transfer limits that could be less than what you wish to purchase on the presale. Please anticipate this and take that into account by thinking ahead and making sure you transfer funds into your wallets in order to clear in time. Should you need to increase your daily limit on transfers please contact your wallet provider to request for a limit increase if anticipated. This could take up to 24-48 hours, otherwise you will need to break up your purchases (should your purchase amount exceed your daily transfer limit) over two days or more. The foundation cannot help with this or extend the sale beyond the time/days allotted.

Once you complete your transaction you will receive an email notification, the first email will confirm the transaction is in process to the address generated and the second email will be to confirm the finality of the transaction. There will be no reason for you to refresh or to resend the funds while this process is happening. The refreshes will happen automatically until transaction is final, which will depend on the crypto you choose to purchase with (BTC, ETH or LTC). Please do NOT attempt to resend funds while this is confirming.

Upon receiving the finality confirmation of your transaction, your RBX wallet will be your resource for staking, turning on your Masternode, Datanode, writing a smart contract / minting an NFT, and access to the Decentralized Sales Tools (DSTs). Please note that you will not be able to access any of the wallet functions except for staking and turning on your Masternode only! The network will commence a public testnet once the sale has ended and allow for only those functions. Upon reaching satisfactory metrics during the testnet, the network will then allow for Datanode participation with the rest of the wallet functionality occurring on mainnet launch. All Masternodes that participate during the testnet will be eligible to receive block rewards.

Per the Masternode documentation in the Masternode section of the site at reserveblock.io, holders will receive a hard-coded tradeable NFT badge identifier for certain levels of Masternodes owned & operated. Both the Diamond & Carbon levels will be limited as follows regardless of how many purchased:

Diamond Founder – 3 per wallet address

Carbon Founder – 2 per wallet address

Install & operating instructions for Masternodes will be available on the morning of Feb 22nd in advance of the presale on the RBX site (reserveblock.io) and the Discord.

**For any questions, please feel free to reach out in the appropriate Discord channel anytime. We encourage all participation from the community.
